About This Major . . .

The Bachelor of Science in Computer Information Systems is a degree in demand today as organizations face the challenges of technology management. This program provides graduates with basic business management skills and computer information expertise to manage computer systems in today’s organizations. Graduates of this program are employed in such occupations as systems analysts, analyst/programmers, database administrators, network administrators, web page designers and help desk specialists.

Graduates assist businesses with creating, obtaining, and maintaining computer information systems that solve problems and assist in facilitating routine business events. As businesses increasingly rely on technology to provide a competitive advantage, employees with an understanding of both business concepts and computer systems are required. Computer information systems studies require students to examine computer systems from organizational, social, psychological, and technical perspectives. Graduates from this program will have taken a variety of courses that were developed based on national guidelines for quality degrees in information systems.
